Boat Engine Cooling Fan

Inboard Engine Cooling Systems. Modern cooling systems with heat-exchangers work with advanced coolants, but still need old-fashioned maintenance to stay efficient. In the old days, many marine engine cooling systems were of the “raw-water” variety, meaning simply that they relied on pumping whatever water the boat was floating in through the engine and pumping it out the exhaust system—salt water, polluted water, algae-infested water, whatever was available.

an issue but when you anchor or tie up things can get stale fast. Move the air and build comfort with the right blower or fan for your needs.

Blowers and Fans for Sale at Go2marine

For cooling, the exhaust fans should be mounted high in the engine room, where the hot air gathers naturally, and as far as possible from the intake ducting, which should introduce fresh air lower down in the space.
